

Claims 1-13. (Cancelled) DO NOT ENTER: /J.H./

14. (Currently Amended) A catalyst for producing hydrocarbon from a syngas in a slurry bed, comprising:

a catalyst support on which cobalt ~~a metallic compound~~ is loaded, wherein an alkali metal content or an alkaline-earth metal content in the catalyst support is in a range of ~~between~~ approximately 0.01 mass% to 0.07 mass%.

15. (Currently Amended) A catalyst for producing hydrocarbon from a syngas in a slurry bed, comprising:

a catalyst support on which cobalt ~~a metallic compound~~ is loaded, wherein an alkali metal content or an alkaline-earth metal content in the catalyst support is in a range of approximately 0.01 mass% to 0.04 mass%.

16. (Previously Presented) The catalyst according to claim 15, wherein the catalyst support simultaneously satisfies a pore diameter in a range of approximately 8 nm to 50 nm, a surface area in a range from 80 m²/g to 550 m²/g and a pore volume in a range from 0.5 mL/g to 2.0 mL/g.

17. (Previously Presented) The catalyst according to claim 14, wherein the catalyst support simultaneously satisfies a pore diameter in a range of approximately 8 nm to 50 nm, a surface area in a range from 80 m²/g to 550 m²/g and a pore volume in a range from 0.5 mL/g to 2.0 mL/g.

18. (Previously Presented) The catalyst according to claim 14, wherein the catalyst support allows the catalyst to have a fractured or pulverized ratio of at most 10% when an ultrasonic wave is emitted for approximately 4 hours at a room temperature to the catalyst dispersed in water.

19. (Previously Presented) The catalyst according to claim 15, wherein the catalyst support allows the catalyst to have a fractured or pulverized ratio of at most 10% when an ultrasonic wave is emitted for approximately 4 hours at a room temperature to the catalyst dispersed in water.

20. (Previously Presented) The catalyst according to claim 16, wherein the catalyst support allows the catalyst to have a fractured or pulverized ratio of at most 10% when an ultrasonic wave is emitted for approximately 4 hours at a room temperature to the catalyst dispersed in water.

21. (Previously Presented) The catalyst according to claim 14, wherein the catalyst support is silica having a spherical shape.

22. (Previously Presented) The catalyst according to claim 15, wherein the catalyst support is silica having a spherical shape.

23. (Previously Presented) The catalyst according to claim 16, wherein the catalyst support is silica having a spherical shape.

24. (Previously Presented) The catalyst according to claim 17, wherein the catalyst support is silica having a spherical shape.

25. (Previously Presented) The catalyst according to claim 18, wherein the catalyst support is silica having a spherical shape.

26. (Previously Presented) The catalyst according to claim 19, wherein the catalyst support is silica having a spherical shape.

27. (Previously Presented) The catalyst according to claim 20, wherein the catalyst support is silica having a spherical shape.

28-41. (Cancelled)

42. (Currently Amended) The catalyst according to claim ~~[[28]]~~ 14, wherein the ~~metallic compound~~ cobalt is made from a precursor of ~~metallic compound~~ cobalt of at least one of an alkali metal or alkaline-earth metal content of at most 5 mass%.

43. (Currently Amended) The catalyst according to claim ~~[[29]]~~ 15, wherein the ~~metallic compound~~ cobalt is made from a precursor of ~~metallic compound~~ cobalt of at least one of an alkali metal or alkaline-earth metal content of at most 5 mass%.

Claims 44-55. (Cancelled)

Claims 56-72. (Withdrawn)

73. (New) The catalyst according to claim 14, wherein a CO conversion is 40% or more.

74. (New) The catalyst according to claim 15, wherein a CO conversion is 40% or more.
